

Heart Anatomy & Blood Flow

RIGHT side = deoxygenated (to lungs) · LEFT side = oxygenated (to body)

Blood flow loop (memorize!):

Right atrium → tricuspid → Right ventricle → pulm. artery → **LUNGS** (drops CO₂, picks up O₂)

→ pulm. veins → Left atrium → bicuspid → Left ventricle → aorta → **BODY** (drops O₂, picks up CO₂)

→ vena cavae → back to right atrium. ► loop complete
